

## Multi Temperature (Dual Temperature) Reefer

Need to store both frozen and chilled products in the same container? Friends Refrigeration has the solution – to convert your existing container to Multi Temperature Refer Container.

There are 2 types of containers

- 1) Duct already installed in container
- 2) No Duct

We start with your containers by making duct (if it type 2 container), install fans & grills on both side of ducts and a partition, making two separate temperature controllable compartments. We provide temperature indicator which indicated the temperature at chiller room. There is also PCB relay panel which controls the fan as per the set temperature.

We offer movable partition. The movable partition allows the flexibility of varying compartment size. If you need to add more freezer space temporarily, just slide the bulkhead accordingly.
