

## Refrigeration Unit

We are suppliers of Excellent and high quality range of Brine Chilling Plant, Refrigeration Unit. This Refrigeration Unit available in various sizes and specifications. It includes both air-cooled and water-cooled.

ICE MAKE unit is with best quality specially designed with the Energy efficient, Low noise, Easy maintenance and is compact size which gives the same performance for many years.

### Condensing Unit

### Features

High cooling with low power consumption

Designed for high ambient condition up to 55°C

Condensing coil with inner grooved copper tubes & aluminum fins

Efficient fans with external motors for single phase and three phase

High & low pressure cut-out including mounting brackets, wired to terminal strip

Large size filter drier, moisture indicator, solenoid valve, oil separator and accumulator

Shell & tube type condenser with high cooling and capacity for high ambient conditions

### Rack System - An advance Refrigeration Technology

- it's advance power saving system compare to normal refrigeration system
- Rack system will work as per product load variation

### Evaporator Unit

#### Features

**Fan** - High reliability, lower temperature resistance and low noise external rotor fans.

**Coil** - High Efficiency heat exchange with in line tube system for minimum loss of air flow between fans and large surface area for better cooling.

**Defrost** - Use electrical heating stainless steel pipe, high leak proofness at the and anti-electrical leakage and long life.

**Unit Body** - Aluminium, PU type Powder Coated, Corrosion resistant and nice appearance body.

**Maintenance** - Compact, adjustable & easy open able side panels for easy installation.

**Control Panel**

### Features

Temperature Controls

Phase Preventing

HP-LP

Protect over current thermal relay ( only compressor)

Auto Defrost

Delay Timer

### Condensing Unit (Air / Water Cooled)
